System Health Eligibility Evaluation Program 1.0.0

General Remarks:

The System Health Eligibility Evaluation Program Version 1.0.0 is software used to evaluate if a GV series transmitter running GV SW 5.0.0, or GV UB118 SW 5.0.1 is eligible to upgrade to HTML based GV SW 6.x series software.

If going from pre-5.Y.Z to 5.Y.Z for GV Series Transmitters, follow IS15006A – *GV Series – Burning Compact Flash Card* (found [here](#)) or follow IS19013 – *GV Series – Burning OS files on SSD* (found [here](#)).

In this release, eligibility is based on the ability of each installed Module Control/Interface PWBs (NAPC158*) or "Rack" to upgrade firmware. Multi-Rack systems will have each PWB assessed by the program, with individual results provided. See IS24005 – *GV Series – Using the System Health Eligibility Evaluation Program* (found [here](#)) for more details on how to manage results.

Installation Considerations:

This software requires no installation but must be used on a Windows 10 or Windows 11 PC that can access the Flash AUI of a GV series transmitter running GV SW 5.0.0, or a GV series transmitter running GV UB118 SW 5.0.1 and can be actioned remotely provided that the transmitter is in Remote Enabled mode.

Added:

- Initial release of System Health Eligibility Evaluation Program.
