January 8, 2015

Nautel VS-TC Series V1.0.1 Release Notes

Note: The handbook has been updated to reflect the changes in this release. The new handbook version is 2.1, and can be found on the Nautel FTP site.

Improvements with this release include:

- Created remote output to indicate which AES input (main or backup) has been selected as the active audio source (as per customer request). Since all available remote outputs were already in use, this change required combining the #TX1 to Air- (A1J5-15) and #TX2 to Air- (A1J5-16) status outputs to a single output #TX1/TX2 to Air +/- at A1J5-15 and creating the new status output #Main/Backup AES Select +/- at A1J5-16.
- Resolved an issue which caused the Transfer Controller Auto AES Transfer and Auto RF Transfer remote outputs to indicate false states following a power loss recovery when the Transfer Controller is operating under Local control.
- Resolved an issue which caused the VS-TC Transfer Controller to recover to Manual RF Transfer Mode on TX1 and Manual Audio Transfer Mode on Main AES after a power loss, regardless of their settings prior to power loss, if the Transfer Controller is operating under Remote control.
